Modular Cable Tester/Tone Generator

NEW
DESIGN

Open or shorted pairs and general mis-wires can be quickly diagnosed with the 468 Tester. Why spend hundreds on a high-end tester when all you really need are basic functions? The 468 Modular Cable Tester rises above the competition with its unique features including a built-in tone generator.

- Connect any 8-position modular plug to the appropriate jack on the transmitter and a sweeping tone signal is applied to all pairs.
- At the far end of the cable, use any Progressive Electronics inductive amplifier (probe) to locate the corresponding plug or jack.
- Connecting the receiver unit automatically activates the test process.
- Sequencing red and green LEDs provide fast, accurate, and simple to understand results.
- Identifies opens, shorts, reversals, transposed pairs and will even alert the technician if connected to an active circuit (without harming the unit).
- 1-year warranty.
- Battery-operated (9V not included).
